

Govern the work. Preserve the field evidence.

Operations governs the accountable journey around the work. Field carries authorised context to the point of delivery and returns a structured record of what happened.

PLATFORM DEVELOPMENT

OPERATIONS

- **Commercial intake**
Clients, enquiries, controlled services and pricing, quotations, orders, acceptance and invoice preparation.
- **People and competence**
Qualifications, roles, pilot currency and accountable review.
- **Aircraft and equipment**
Fleet context, maintenance history, technical status and supporting records.
- **Mission readiness**
Site, risk, documents, permissions, constraints, crew and explicit release authority.
- **External systems**
Direction for controlled exchange with accounting and other business packages.

FIELD

- Versioned MissionPack and current site, task, controls and evidence requirements.
- Offline-aware on-site checks, observations, photographs, tracks, samples and attestations.
- Structured exceptions and completion evidence returned with mission context.
- Lone-worker and man-down support within a wider safe system of work.

A GOOD FIT FOR

For drone contractors, multi-crew operators, field teams and organisations commissioning accountable work across suppliers.

CURRENT BOUNDARY

Operations supports the management and demonstration of operational compliance. It does not confer CAA approval, certify a flight as lawful or replace the UAS operator and Remote Pilot.
