

One governed evidence chain. Independent products.

Tropos connects operational requirements, field capture, domain analysis and human decisions without hiding product boundaries or creating competing copies of the truth.

GOVERNED ANALYSIS FOUNDATION

THE PRODUCT FAMILY

- **Operations**
Requirements, clients, quotations, work, people, aircraft, competence, maintenance and authority.
- **Field**
Versioned mission context, on-site checks, attributable observations, photographs, samples and attestations.
- **SilvaSense**
Map-centred forestry evidence, validation and reporting in commercial validation.
- **AgriSense**
Agricultural evidence and intervention-support workflows in controlled trials.
- **Intelligence + Assistant**
Governed datasets and models, with source-linked access and coordination for authorised people.

WHY CONNECT THE PRODUCTS?

- Context stays attached from the original question to the recorded decision.
- Each product remains authoritative for the records it owns.
- Identity, provenance, spatial context and audit can be shared through controlled links.
- Customers can begin with one focused product and connect more where the evidence chain benefits.

A GOOD FIT FOR

For land managers, contractors, commissioning organisations, researchers and partners who need environmental evidence to remain inspectable and accountable.

CURRENT BOUNDARY

Commercial direction: focused products, selected combinations or a wider SaaS platform. Packaging, service levels and general availability remain under development.
